Output Encoding				
OE-01  All untrusted data outputted to any interface are properly escaped for the particular context using a common and standardized approach.	<p>These interfaces can include (but are not limited to):</p> <ul style="list-style-type: none">• SQL• NoSQL• Web Services• LDAP• ... <p>Parametrized queries should be used in all cases.</p>	Prevent injection attacks, e.g.: <ul style="list-style-type: none">• SQL Injection• LDAP Injection	Task ▾	

JAVA Application

Example of a prepared statement for SQL queries:

```
String selectSQL = "SELECT USER_ID, USERNAME FROM DBUSER  
WHERE USER_ID = ?";  
PreparedStatement preparedStatement = dbConnection.prepareStatement(selectSQL);  
preparedStatement.setInt(1, 1001);  
ResultSet rs = preparedStatement.executeQuery(selectSQL)  
;  
while (rs.next()) {  
    String userid = rs.getString("USER_ID");
```

SecurityRAT inherits user's rights in JIRA

A wide-angle photograph of a sunset or sunrise over a body of water. The sky is filled with wispy clouds, transitioning from deep blue at the top to warm orange and yellow near the horizon. A small, bright sun is visible on the horizon line. The water in the foreground is dark and reflects the colors of the sky.
